SUMMARY

Security engineer with 3+ years on Zoho's security team, focused on offensive security and vulnerability research for enterprise products (ManageEngine), on-prem and cloud. OSCP+ certified, with hands-on strength in penetration testing, secure code review, and running bug bounty triage end to end: validating findings, scoring with CVSS, assigning CVEs, and verifying fixes. I look beyond standard bugs for business-logic flaws and low-level chaining issues. I care about why something breaks, not just that it breaks.

CERTIFICATION

[OSCP+ \(OffSec Certified Professional\)](#) · 2026

CORE SKILLS

Penetration Testing: Penetration testing across web, API, and network; privilege escalation (Windows/Linux), Active Directory attack paths, post-exploitation; business-logic and low-level chaining vulnerabilities

Vulnerability Management: Bug bounty triage, exploit validation & reproduction, CVSS scoring, CVE assignment, root-cause analysis, remediation coordination, fix verification

Application Security & Code Review: Secure code review / source-code analysis, OWASP vulnerabilities, access-control & authentication flaws, IDOR, SSRF, injection, XSS

Secure Development & Compliance: Secure SDLC, SSDF-aligned controls, PCI DSS, security test-case design, architecture & threat-model review

Tools & Scripting: Burp Suite, Nmap, Metasploit, Wireshark; Python (automation, PoC validation); Bash; Linux & Windows

PROFESSIONAL EXPERIENCE

Zoho Corporation

Member of Technical Staff, Security Engineer

Chennai, India

Sep 2022 – Present

- Triaged 560+ bug bounty submissions end to end: reproduction, exploit validation, CVSS scoring, root-cause analysis, and CVE assignment, coordinating remediation with product teams.
- Discovered and reported 280+ vulnerabilities, including 35+ critical-severity issues, across ManageEngine and Zoho products.
- Conducted 37+ security assessments (service and feature-level) across on-prem and cloud products, mapping real-world attack paths and delivering actionable remediation guidance.
- Found 25+ vulnerabilities across on-prem ManageEngine agents and, based on them, defined reusable security test cases for agent posture, covering pre-deployment validation, agent-to-server communication, and master-key storage, adopted as standards across the org.
- Performed secure code reviews across product codebases, identifying design and implementation flaws before release.
- Verified fixes and aligned security work with SSDF and PCI DSS; built Python automation to detect sensitive-data exposure across public-facing assets, reducing manual review effort.

Hyperspace IT India Pvt. Ltd.

Security Intern

Hyderabad, India

Sep 2020 – Apr 2021

- Performed web application penetration testing and documented vulnerabilities with remediation recommendations.

EDUCATION

M.Tech, Cybersecurity · Amrita Vishwa Vidyapeetham

2021 – 2023

B.E., Electronics & Communication · Saveetha School of Engineering

2016 – 2020
